

ColourShield PPF Wet Apply Coloured PPF

The ColourShield wet apply series is the ideal solution for automotive professionals who want to protect and personalise in one application. The wet apply installation allows for maximum repositionability and conformity, while the durable TPU construction offers excellent elasticity and surface memory. The self-healing top coat protects against light scratches and swirl marks and offers a hydrophobic surface for easy maintenance and water beading. The ColourShield wet apply series is UV stable to prevent yellowing and colour fade over time, with an OEM-Quality finish for invisible edges and paint-like aesthetics.
